

HEIL HEINKEL!

*High-speed German Bombers with
the New Inverted Vee-Twelves*

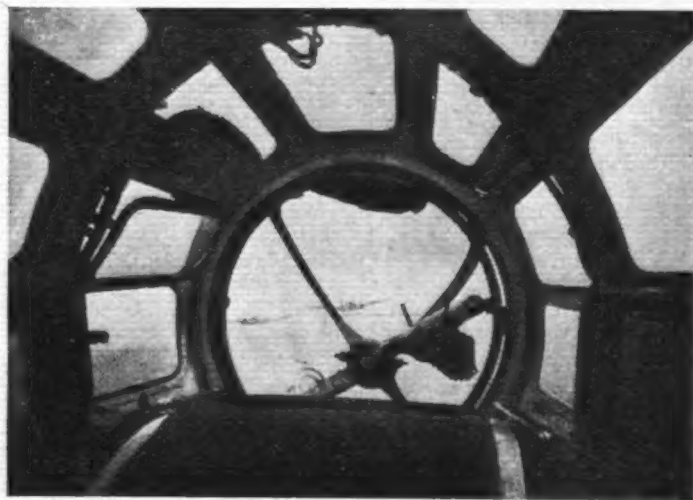

(Left) Military-type He. 111 medium bombers which must do nearer 300 than 250 m.p.h.

(Below) A new Heinkel dive-bomber attack monoplane, surely one of the shape-liest aeroplanes ever built.

A German artist's impression: Mounting a Daimler-Benz DB 600 inverted vee in a He. 111. The original version of this machine had vee-twelve B.M.W.s.

(Above) A "shot" through the nose turret of a He. 111 bomber.

(Below) A close-up of one of the sleek He. 111s now in service in large numbers with the German Air Force. This machine must be one of the most formidable of its class in the world.
